

NELA Remote Service

NELA VPN-Service+

Taking some pressure of your IT Department, while still managing fast remote access? That's why NELA created it's own VPN solution based on OpenVPN!

Why Remote Service?

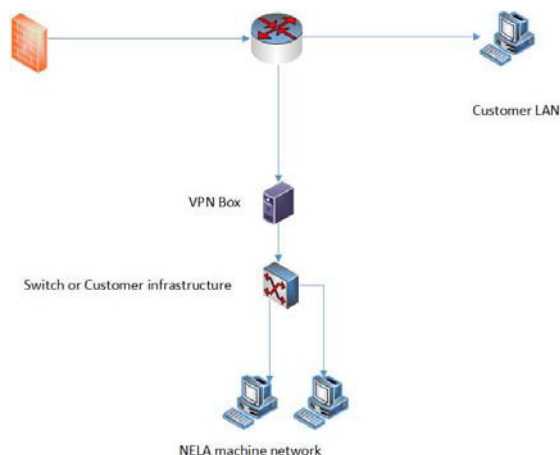

Thanks to remote access our NELA Support is able to provide immediate assistance in case of a problem, even realize suggestions for improvements and changes on the go. This way PLC- and PC-Software configurations can be modified, most of the time even during the installation process.

Advantages

- Administration through NELA to reduce your IT Departments labor
- Compatible with all networks
- Immediate reaction is possible to minimize down time
- zero-hassle setup and no professional know-how necessary

Secure Data

The latest encryption standards (SHA 256, RSA 4096bits) ensure absolute safety of your corporate network. Due to the fact that the NELA equipment does not need any data from your internal network, it can work in it's own autonomous NELA machine network.

Highlights

- Universal solution for any business internet connection
- Can be tailored to meet the requirements of your corporate network
- Can be customized to fit your individual needs
- Plug & play
- Security thanks to the latest encryption technologies
- No open ports from the internet needed, keeps your corporate network safe from attacks
